

Microfiber Washing Instructions

Brush mop heads using the Rubber Brush to remove hair and lint and rinse them prior to the washing cycle.

All Norwex microfiber should be laundered with quality laundry powder or liquid in a cold, warm or hot wash. Periodically it is a good idea to wash them on the hottest wash available as this will open the fibers and release debris and grease caught deep within the fibers.

If your laundry system is not capable of heating the water, you may want to occasionally deep clean your microfiber by boiling it on the stove for about 10 minutes.

After the rinse cycle, hanging cloths in direct sunlight also helps sanitize them using the sun's ultra violet rays or dry them in a hot clothes dryer without any lint (fluffy) garments or towels.

To remove stubborn stains, they can be boiled for ten minutes to allow the fibers to swell and release any debris or spray the stain with the Norwex Carpet Stain Buster and allow to soak for ten minutes before laundering.

DO NOT USE bleach, abrasive solutions, fabric softener or dryer softener sheets as these destroy the products ability to clean.

DO NOT iron.

DO NOT USE with paints or inks.
